

REFOCUS SUPPORTS **ALL-ENERGY 2012**

UK Offshore wind supplement out soon:

sponsorship and advertising opportunities still available

EDITORIAL HIGHLIGHTS:

- Where oil and gas meets the offshore industry - areas of potential collaboration
- Turbines - innovation and developments targeted at the offshore environment
- Are UK Ports ready for Round 3?
- Operation & Maintenance - boosting the bottom line
- How can met masts help with offshore wind?
- Careers in Offshore wind
- Health & Safety.

Tap into the UK's offshore wind supply chain opportunities

Are you interested in being involved in the UK's burgeoning offshore wind sector? If so, would you like to target those developing projects and technology in this sector?

Renewable Energy Focus is publishing a UK Offshore wind supplement that will be distributed alongside the March/April issue.

As well as being distributed to our print and digital circulation of around 40,000, the special supplement will have special distribution at the following high profile wind power events in the next few months:

- **EWEA 2012** (under discussion);
- **All Energy 2012** (Refocus is a special media partner - supplements will also be in the delegate's bags and we are sponsoring a special Offshore Maintenance track at the event);
- **Renewable UK Global Offshore**

What will the supplement cover editorially?

There's no disputing Europe's pre-eminent position in the offshore wind sector, and the UK is up there at the very top of that European league - with 487 turbines installed (1,534MW of capacity); a further 2 GW in construction; and 42.1GW tabled for future development as part of the Round 3 programme.

But with this ever increasing development of offshore wind farms around the UK and Northern Europe, attention is now turning to the supply chain opportunities that the Projects could bring - in all sectors from wind turbines to ports to shipping...and more.

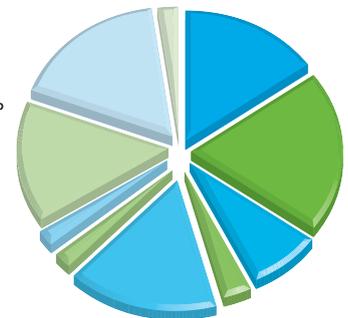

In addition, ongoing operation and maintenance of these installations is crucial to ensure the blades keep turning as they move further offshore and into deeper water.

The supplement will have features that include the following topics:

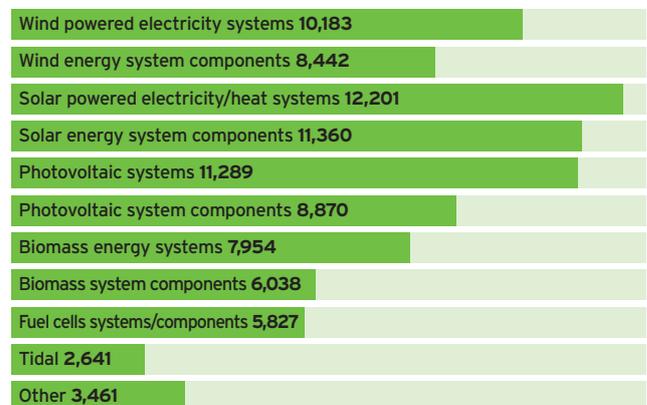

- Where oil and gas meets the offshore industry - areas of potential collaboration;
- Turbines - innovation and developments targeted at the offshore environment;
- Are UK Ports ready for Round 3?;
- Operation & Maintenance - boosting the bottom line;
- How can met masts help with offshore wind?;
- Careers in Offshore wind;
- Health & Safety.

So, if you are involved in any of the above sectors and would be interested in advertising and sponsorship opportunities, contact your account manager (see front of this leaflet for details). Several high profile packages including sponsorship are still available so don't delay.
